Reviews

"Best small volume spec on the market" Rating: 5.0 ★★★★ Application Area: Protein/nucleic acid quantitation

"The Implen NanoPhotometer N50 is extremely easy to use (intuitive menus and settings), accurate, and genuinely capable of measuring very small volumes repeatably. The touch screen works well even with gloves. Window configurations are adaptable so you can customize the information you're looking at while working. The instrument is light and mobile, and since it's all-in-one, you can literally move it to where you're working as needed... In my opinion, it's the best nano-scale measurement device on the market for routine lab sample quantification and spectral reading."
